

AMENDMENT TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

30. (currently amended) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

 said electrodes are each supported at the opposite ends of said tubular housing,

each of said mirrors are is supported in stationary relationship relative to the on one of said electrodes and

 said electrodes and with said mirrors thereon are adjustable relative to one each other another.

31. (currently amended) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

 said electrodes are each supported at the opposite ends of said tubular housing,

 said mirrors are designed in one piece with said electrodes and

 said electrodes and with said mirrors attached are adjustable relative to one

another each other.

32. (currently amended) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

each of said electrodes is separately each are held on a different one of end pieces at the opposite ends of said tubular housing,

each of said mirrors are supported in stationary relationship relative to on one of said electrodes and

said electrodes and with said mirrors thereon are adjustable relative to one another each other by adjusting elements.

33. (currently amended) A CO₂ slab laser according to Claim 32, characterized in that the each of said electrodes are is designed in one piece with the one of said end pieces.

34. (currently amended) A CO₂ slab laser according to claim 33 with at least one of said the end pieces attached to the tubular housing with said adjusting elements by way of a flexible bearing.

35. (previously presented) A CO₂ slab laser according to Claim 34, characterized in that the flexible bearing is a bellows.

36. (currently amended) A CO₂ slab laser according to Claim 35 32, characterized in that ~~the~~ said adjusting elements contain piezoelectric crystals which are capable of being driven electrically.

37. (currently amended) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing as set forth in Claim 31, characterized in that ~~the~~ said electrodes are held in said tubular housing by ~~the~~ end pieces sealing off the tubular housing.

38. (currently amended) A CO₂ slab laser according to Claim 32, characterized in that said mirrors are designed in one piece with said end pieces forming a part of said housing.

39. (currently amended) A CO₂ slab laser according to Claim 31, characterized in that said mirrors are designed in one piece with end pieces on forming a part of said housing.

40. (previously presented) A CO₂ slab laser according to Claim 30, characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another.

41. (previously presented) A CO₂ slab laser according to Claim 31,

characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another.

42. (currently amended) A CO₂ slab laser according to Claim 32, characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another by said adjusting elements.

43. (currently amended) A CO₂ slab laser according to Claim 33 characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another by said adjusting elements.

44. (previously presented) A CO₂ slab laser according to Claim 37, characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another.

45. (currently amended) A CO₂ slab laser according to Claim 38, characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another by said adjusting elements.

46. (previously presented) A CO₂ slab laser according to Claim 39, characterized in that the tubular housing is designed in two parts, said two parts being interconnected and adjustable relative to one another.

47. (previously presented) A CO₂ slab laser according to Claim 32, characterized in that at least one of the end pieces defining said housing is attached to the tubular housing by way of a flexible bearing.

48. (currently amended) A CO₂ slab laser according to Claim 33 32, characterized in that at least one of the end pieces ~~defining said housing~~ is attached to the tubular housing with said adjusting elements by way of a flexible bearing.

49. (cancelled) ~~A CO₂ slab laser according to Claim 33, characterized in that at least one of the end pieces defining said housing is attached to the tubular housing by way of a flexible bearing.~~

50. (currently amended) A CO₂ slab laser according to Claim 4 30, characterized by adjusting elements that are supported on the tubular housing and act on the said electrodes for positional adjustment of said electrodes.

51. (currently amended) A CO₂ slab laser according to Claim 4 30, characterized in that the tubular housing (10) is designed cylindrical and the said electrodes in section form a circular segment whose radius is smaller than the inside radius of the tubular housing.

52. (currently amended) A CO₂ slab laser according to Claim 4 30, characterized in that the said electrodes and hence the with said mirrors attached are fixed

relative to one another after adjustment.

53. (new) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

 said electrodes are each supported at the opposite ends of said tubular housing,

 each of said mirrors is supported in stationary relationship on one of said electrodes and

 said electrodes with said mirrors thereon are adjustable relative to each other,

 cooling means for cooling said electrodes with flow starting at the ends of said electrodes at the opposite ends of said tubular housing.

54.(new) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

 said electrodes are each supported at the opposite ends of said tubular housing,

 said mirrors are designed in one piece with said electrodes and

 said electrodes with said mirrors attached are adjustable relative to each

other,

cooling means for cooling said electrodes with flow starting at the ends of said electrodes at the opposite ends of said tubular housing.

55. (new) A CO₂ slab laser having a gas-filled chamber defined by a tubular housing, with at least two electrodes that extend into the tubular housing, said electrodes overlapping one another and forming a discharge chamber, and resonator mirrors provided within said housing, characterized in that

said electrodes each are held on end pieces at the opposite ends of said tubular housing,

each of said mirrors are supported in stationary relationship on one of said electrodes and

said electrodes with said mirrors thereon are adjustable relative to each other by adjusting elements,

cooling means for cooling said electrodes through said end pieces with flow starting at the opposite ends of said electrodes at the opposite ends of said tubular housing.
